What is Babel?

Babel is a JavaScript compiler

Babel is a toolchain that is mainly used to convert ECMAScript 2015+ code into a backwards compatible version of JavaScript in current and older browsers or environments. Here are the main things Babel can do for you:

- Transform syntax
- Polyfill features that are missing in your target environment (through [@babel/polyfill](#))
- Source code transformations (codemods)
- And more! (check out these [videos](#) for inspiration)

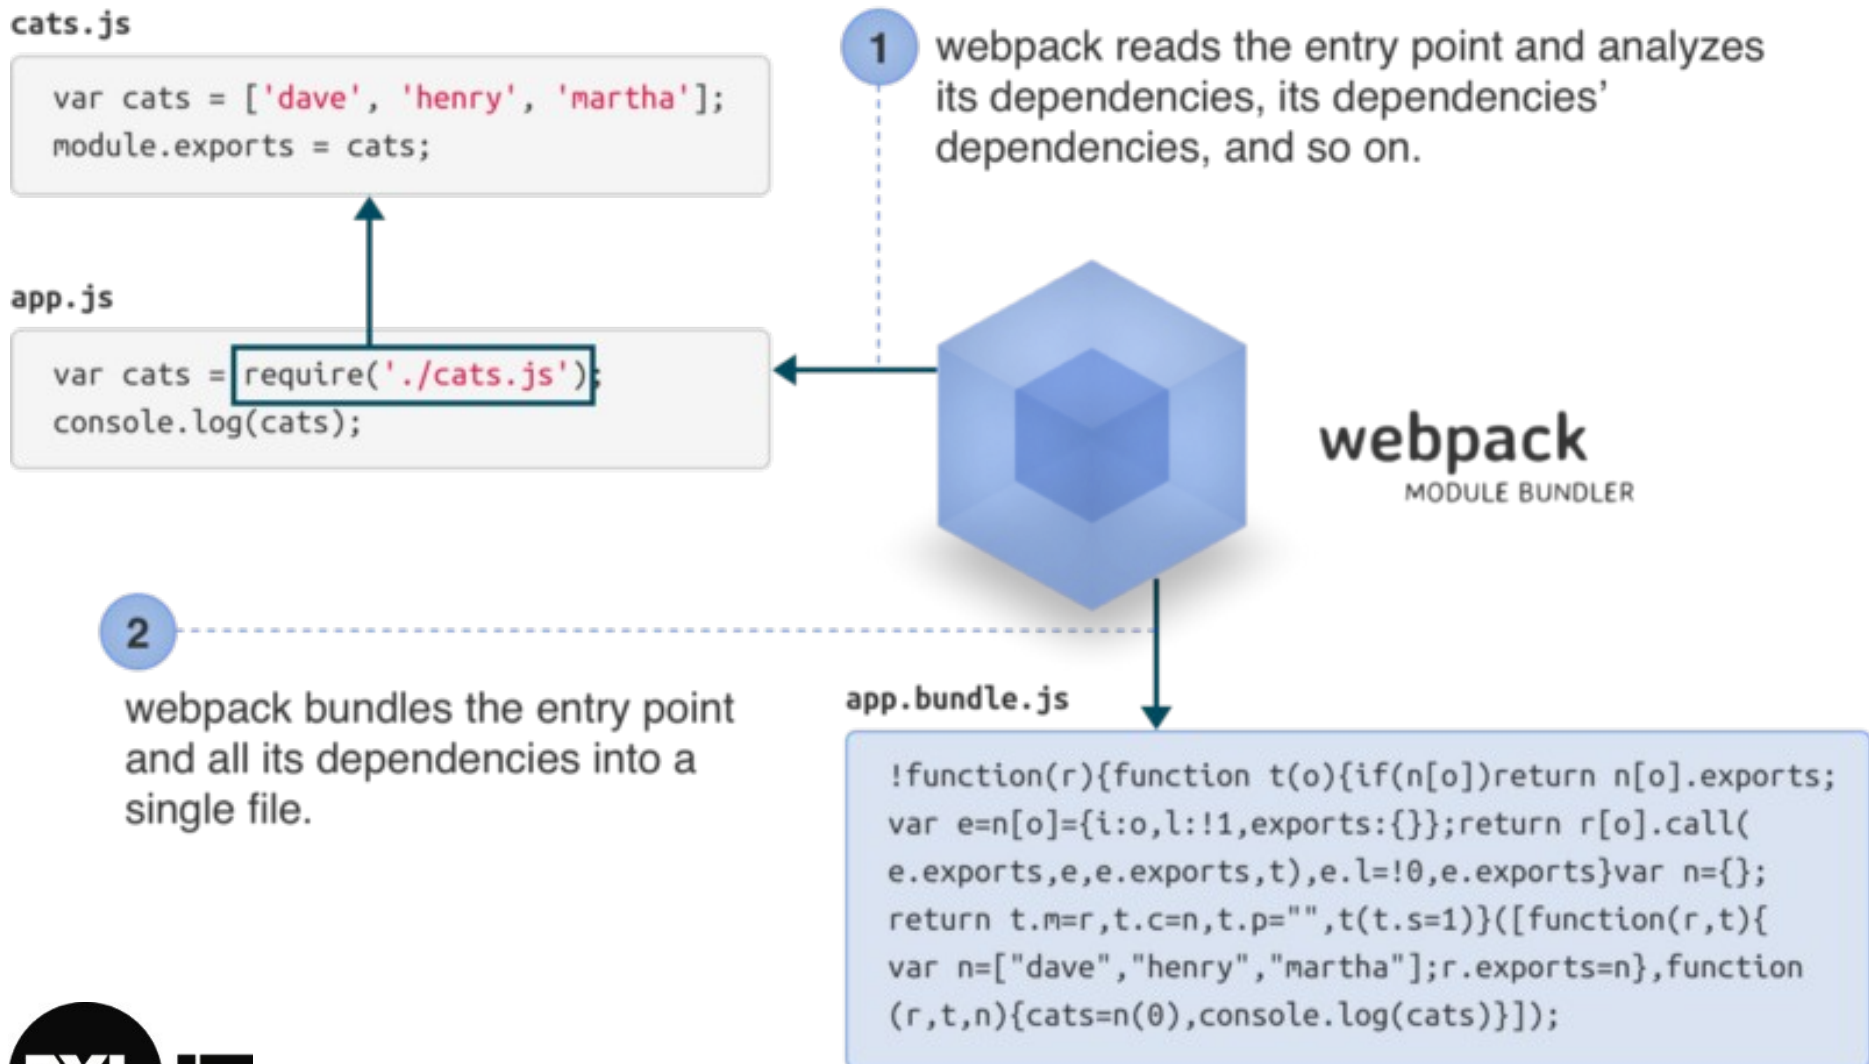

JavaScript

 Copy

```
// Babel Input: ES2015 arrow function
[1, 2, 3].map((n) => n + 1);

// Babel Output: ES5 equivalent
[1, 2, 3].map(function(n) {
  return n + 1;
});
```

What is Webpack?

Installatie

(1) Installeer nodejs

<https://nodejs.org/en/download/>

(2) Installeer npm

<https://www.npmjs.com/get-npm>

(3) Download de skelet-toepassing van Blackboard
webpack_babel_skeleton.zip

node_modules

public

src

test

index.html

package.json

webpack.config.js

.babelrc

package.json ✕

```
1|{
2|  "name": "webpack_babel_jest_skeleton",
3|  "version": "1.0.0",
4|  "description": "",
5|  "main": "app.js",
6|  "scripts": {
7|    "build": "webpack --config webpack.config.js",
8|    "test": "jest",
9|    "start:server": "webpack-dev-server"
10|  },
11|  "keywords": [],
12|  "author": "",
13|  "license": "ISC",
14|  "devDependencies": {
15|    "babel-cli": "^6.26.0",
16|    "babel-core": "^6.26.3",

index.html

package.json

webpack.config.js

.babelrc

JS webpack.config.js ✕

```
1 const path = require("path");
2
3 module.exports = {
4   mode: 'development',
5   entry: "./src/js/app.js",
6   output: {
7     path: path.resolve(__dirname, "public/js"),
8     filename: "bundle.js"
9   },
10  module: {
11    rules: [
12      {
13        test: /\.js$/,
14        exclude: /(node_modules)/,
15        use: {
16          loader: "babel-loader",
17          options: {
18            presets: ["babel-preset-env"]
19          }
20        }
21      }
22    ]
23  }
24};
```

node_modules

public

src

test

index.html

package.json

webpack.config.js

.babelrc

.babelrc

```
1 {
2   "presets": [
3     [
4       "env",
5       {
6         "targets": {
7           "browsers": ["last 2 versions", "safari >= 7"]
8         }
9       }
10    ]
11  ]
12 }
```

Alle modules downloaden:

\$ npm install

babel, webpack, jest worden in node_modules geplaatst

Bundle maken

\$ npm run build

script met naam build (uit package.json) wordt uitgevoerd

```
"scripts": {  
  "build": "webpack --config webpack.config.js",  
  "test": "jest",  
  "start:server": "webpack-dev-server"
```

in public/ wordt bundle.js gemaakt

Tests runnen (zie slides jest)

\$ npm run test

Server starten

\$ npm run start:server
